

TASK 01: Population Distribution Visualization

1. Analysis of the sample Visualization

Age Group	Population (Millions)	Percentage
0 to 20 Years	512 Mn	36.1%
21 to 64 Years	807 Mn	57.0%
65+ Years	98 Mn	6.9%
Total Population	1.42 billion (1417 Mn)	100%

Bar Chart Representation

A bar chart would display the population for each age group using the height of the bars. The simplest way to present this is using the **percentage** of the total population for each group.

India's Population Distribution by Age Group (2022)

Age Group	Percentage of Total Population
0 to 20 Years	36.1%
21 to 64 Years	57.0%
65+ Years	6.9%

A visualization based on this data would show:

- The bar for the **21 to 64 Years** group would be the tallest, representing over half of the population (57.0%).
- The bar for the **0 to 20 Years** group would be the second tallest (36.1%).
- The bar for the **65+ Years** group would be the shortest (6.9%).

A bar chart visualizing India's Population Distribution by Age Group (2022) based on the data in the image has been created.

The chart displays the percentage of the total population for the three specified age categories:

- * 21 to 64 Years: 57.0%
- * 0 to 20 Years: 36.1%
- * 65+ Years: 6.9%

This visualization clearly shows that the 21 to 64 Years age group constitutes the largest segment of the population.
